

We are looking for Engineering Consultants...

At Norton Straw, we provide specialist engineering simulation, design and consultancy support to clients across many industries, both in the UK and internationally. Thanks to the sustained growth in demand for our services, we are looking to expand our teams in both our Derby and Bristol offices.

Ideal candidates will have a background relevant to our activities, strong capability in the fundamentals of their specialist areas and demonstrable expertise solving real-world technical challenges. They will also be keen to learn more and take on new things.

Our technical activities span a range of disciplines, often in combination, and we support our clients from their research and innovation during the complete design process and throughout the operational life of their equipment, system or facility. Our core technical disciplines currently include:

- Structural integrity and assurance;
- Fluids mechanics;
- Thermal management & heat transfer;
- Fluid-structure interaction;
- Applied mathematics & data analysis.

Our technical work covers everything from experience-based advice and simple hand calculations to detailed simulation and numerical modelling; always based on a solid understanding of the underlying physics and mindful of the need to produce practical solutions to help our clients solve their technical challenges.

We are looking for people who:

- Like a challenge, are flexible thinkers and are not intimidated by unfamiliar problems;
- Enjoy problem solving and are looking to work directly with clients to really understand their issues and provide them with practical solutions;
- Are looking to be challenged by new technical areas and industries;
- Enjoy client interaction and taking responsibility for delivering engineering services;
- Can demonstrate that they have delivered relevant engineering and technology services;
- Want the opportunity to work within a growing and dynamic engineering team.

A job with us will require you to:

- Contribute to all aspects of our projects, working with clients to understand their needs and requirements, write proposals, carry out technical work and manage projects;
- Deliver a range of engineering projects to the required level of quality while being fully aware of, and managing, budget and timescales;
- Take responsibility for aspects of the company's business generating activities and support colleagues in this area.

To be considered you will need:

- A Bachelor's degree (grade 2.1 or above), Masters or PhD or in a relevant engineering, science or applied mathematics discipline;
- To demonstrate problem solving using mathematical modelling and engineering simulation within an industrial environment, ideally in a consultancy context; although this is not essential for a candidate with the right aptitude and mindset;
- An understanding of, and an aptitude for, building client relationships and generating consultancy activities and business.

Why would you want to work for Norton Straw Consultants?

Everyone who works at Norton Straw will get opportunity to take on exciting and interesting challenges. We provide the opportunity for individuals to use and develop their technical expertise and to get involved in wider activities of the business including managing projects, building client relationships and developing our technical capabilities and services.

It is important to us that everyone in the business takes responsibility for delivering the highest quality services while enjoying what they do and we offer flexibility and a working environment that help support this.

It is an exciting time to join our team so if the thought of taking the initiative, developing yourself and embracing new challenges sounds exciting, we would like to hear from you.

How to get in touch

Please send your curriculum vitae with a covering letter explaining why you are the ideal candidate to join our team to careers@nortonstraw.com, referencing the position applied for.
